

Certified International Business Analyst Professional (CIBAP)

Introduction

It is through projects that we create value in the form of improved business processes and new products and services in response to changes in the business environment.

Since data and information are the lifeblood of virtually all business practices, IT projects are often the key mechanism used to turn an organization's vision and strategy into reality.

Executives across the spectrum are adopting the practice of superior business analysis to increase the value IT projects bring to the business. The talents, competencies, and heroics of project managers and technologists alone cannot drive value into the organization.

Course Outlines
